Data Engineer

Summary

Software and Data Engineer with 10+ years designing and scaling distributed data platforms. At Dropbox, led architecture of a Snowflake-based financial warehouse and governance framework with 40+ automated quality checks—reducing data-issue detection time by 80%.

Work Experience

Data Structure and Algorithms Adjunct Instructor - Part-Time · CodePath · Charlotte, NC Dec '24 - Present

- Teach data structures and algorithms to diverse undergraduate student populations, emphasizing real-world applications.
- Collaborate with CodePath staff, faculty mentors, and teaching assistants to ensure program alignment, continuous improvement, and a positive learning environment.
- Foster inclusive learning environment and collaborate with industry professionals.
- Mentor 30+ students per semester and collaborate with faculty to ensure program alignment and continuous improvement.
- Train and manage 3 teaching assistants.

Senior Data Engineer · Dropbox Oct '21 - May '24

- Led the architecture and development of a new financial data warehouse and model to service financial business metrics around DocSend's product. Leveraging Stripe, Airflow, FiveTran, and Snowflake, the system replaced ChartMogul as the financial reporting tool.
- Architected distributed data processing solutions handling HelloSign and DocSend subscription events using Snowflake, RedShift, and Hadoop.
- Built a production observability and data-quality framework (40+ automated checks, dashboards, logging, and PagerDuty-based alerting) that reduced data-issue detection time from 5 days to 1 day and improved SLA adherence for financial reports.
- Led onboarding and technical enablement for contractors and new engineers by producing architecture docs, runbooks, and training materials that reduced onboarding time by 85% and enabled cross-team contributions to the financial data platform.
- Participated in on-call rotations, successfully resolving 95% of incidents on the first alert, which improved system uptime and reliability for critical financial data needs.

Software Engineer · Microsoft Mar '20 - Oct '21

- Modernized the financial data warehouse using Azure Data Factory, Azure SQL, and Azure Storage, increasing ETL throughput while enabling unified, near-real-time reporting for FP&A.
- Integrated GitHub and acquired-entity financial feeds, supporting FP&A with unified, near-real-time dashboards.
- Collaborated across teams to deliver enterprise-scale data solutions supporting strategic business decisions.

Software Engineer · BrightHive May '19 - Mar '20

- Productionized a reusable ETL ingestion framework on AWS (Airflow, Dagster, Python) to onboard 10+ university data sources into a governed collaborative warehouse, standardizing pipelines and SLAs for high-quality curated data.
- Established unified data pipeline infrastructure and documented best practices for performance optimization.
- Built reusable ETL workflows ensuring high-quality data availability across distributed systems.

Graduate Research Assistant · University of Pittsburgh

Aug '18 - Dec '18

- Developed ETL data pipeline tool in Python for loading relational data into Neo4j graph databases.
- Applied machine learning similarity metrics and data science techniques for analytical problem-solving.

Specialist Applications Developer · AT&T

Jun '14 - Aug '17

- Mentored and onboarded 5+ developers, improving team productivity and reducing onboarding time.
- Led DevOps transformation, migrating development environment to modern CI/CD practices.
- Developed MVC web applications using Node.js, JavaScript, and Spring frameworks.

Projects

DataCamp Course Author & Instructor · www.datacamp.com/courses/advanced-git

Feb '25

Led course design from concept to launch, collaborating with DataCamp's content team to ensure technical accuracy and engaging delivery. Served as subject matter expert, making complex Git concepts accessible to over 10,000 learners worldwide.

Skills

Tableau

Languages & Frameworks: SQL · Python · Javascript · Ruby

Data Infrastructure: Apache Airflow · Apache Spark · Hadoop · HDFS · S3 · Azure Data Factory · Azure SQL

Databases & Warehouses: Snowflake · PostgreSQL · Redshift · MySQL · DynamoDB
